

Pitch Clover

Scientific Name: Psoralea bituminosa

Flowering Period: February to May

Colour: Lilac

Frequency: Very common

Habitat: Countryside paths, field track, waste ground especially near arable areas (areas suitable for farming)

General information:

The plant is highly branched and it often has a bushy structure or a thick cushion over the walls. The stems are thin and pubescent (have white short hairs) and are either dark brown or black. The leaves and flower heads have a long stalk (the flower heads' stalk is always longer). It s a non-poisonous flower and its height varies between 25-100 cm.
